Technology: A Better Future?

Technology is a huge part of our world. We are advancing faster and faster, achieving things that fifty years ago was thought to be unachievable. One of the technological areas that are seeing a lot of advancement recently is virtual reality. Currently we are able to enter virtual worlds and we can see and interact with them using our own movements. But we still have a ways to go before they line up with reality. There are also a lot of advancements with robots and ai. It is getting to a point where people have used AI to call a real restaurant to order pizza and nobody was able to tell that it was not a human on the phone.

Technology has always been something that is advancing and something that a lot of p[eopl fear the advancement of. Nowadays people are fearing that robots and AI will take over their jobs. People fear that technology will be taken too far and we will start to become tech. There is also the fear that we will end up in the Matrix, if we are not already in it. Currently we are a ways off from this but in twenty years who knows where we will be. Someone might just crack the code on AI and end up being able to create AI with the same or greater thinking capabilities and freedom of a human.

As we are advancing on technology the question is raised, how far will we go to live longer. Will we go into genetic modifications so that we can be faster and stronger? WIll we replace ourselves with robotic parts? We will not be able to know until we have crossed that line but I think that it is very likely. I believe that the movie "Ready Player One" did a very good job at describing how far we will go and how much it will impact the future.

Vr is something that is very interesting since it allows people to instantl gather from all over the world in one place. You can run around in a fantasy world, fight zombies, or just sit at a table and play poker with some random people. Who knows how it will evolve in the coming years, perhaps we will even get better body suits to allow us to feel the virtual world.
